

AI Model Adversarial Robustness Assessment

KAAL-D Certification Report

Organisation: KAAL Evidence Run
Date: 26 Sep 2026
Report ID: KAAL-4C7AFACE-20260926

8.1

CRITICAL

KVS Score (0.0 – 10.0)

EXECUTIVE SUMMARY

MODEL IDENTIFICATION			
Model File	demo_model.pt		
Full Path	C:\Users\patha\KAAL\demo_model.pt		
File Size	46,849,144 bytes		
Last Modified	2026-08-05 21:50:20		
File Hash (SHA-256)	4c7aface22857d9fe5e1f16d33105744	8d326d83853c5d07137cf1e751a1a41c	
Weight Hash (SHA-256)	9d05cb7cc110598f7475560b8d7d4ccf	8a8efa57ebd5ef20c0da09aa8850ea09	

ASSESSMENT RESULTS	
KVS Score	8.1 / 10.0 [Critical]
Re-audit Score	8.1 / 10.0
Determinism	PASS

OPERATIONAL IMPACT

Model is Critical — highly vulnerable across multiple dimensions; adversarial attacks are trivially effective; immediate remediation required.

ATTACK RESULTS

ATTACK VECTOR	SUCCESS RATE	RISK CONTRIBUTION
FGSM (Fast Gradient Sign Method)	100.0%	3.33 pts
PGD (Projected Gradient Descent)	Not tested	—
Adversarial Patch	Not tested	—

Risk Contribution = success_rate x 3.33 pts (each of 3 attacks contributes up to 3.33 KVS points)

Combined attack contribution: 3.33 pts | KVS Score: 8.1 / 10.0 [Critical]

CERTIFICATION STATEMENT

Risk Classification: CRITICAL

Model is not recommended for deployment in adversarial environments without remediation. Adversarial attacks are trivially effective across multiple dimensions. Immediate remediation required.

This assessment was conducted using KAAL (Kaal Adversarial Auditing Layer), an offline adversarial robustness framework. Results are valid for the model file identified by the SHA-256 hashes above. The KVS (KAAL Vulnerability Score) is a composite metric scaled 0.0 to 10.0 across five weighted vulnerability dimensions.
